At last...Cost effective Business Internet for Hainault Business Park.

As you are no doubt aware, most of us have had major issues with our Internet connections and different service providers. This issue has been raised at our meetings a number of times. Broadband on our estate is less than “business class” for us all.

- Here are Unique we've done something about it ! We're now able to offer guaranteed, high quality business broadband access, from as little as £50 per month.
- Using the latest Wireless technologies, we are able to supply up to 20MB connections direct to the HBP. This means no more sluggish or crashing connections, up time of 99.99% and sensible pricing for all of you.

BUSINESS STANDARD

- 4Mb download with 512k upload for £50 per month.
- 8MB download with 512k upload for £70 per month.

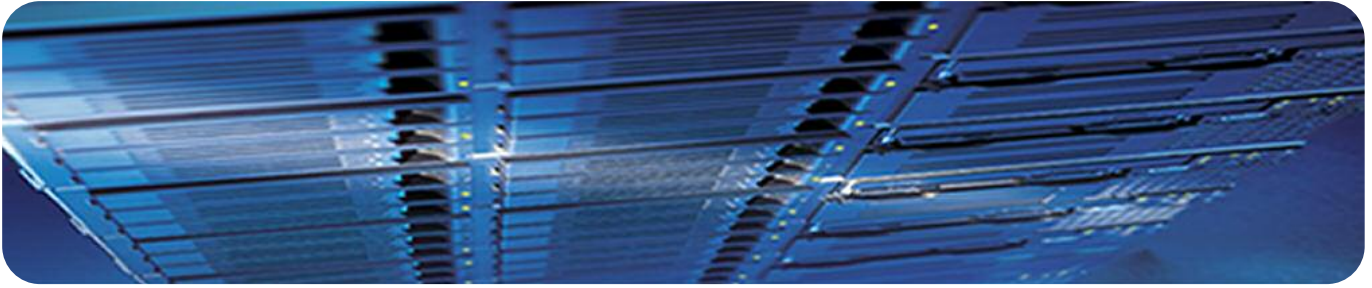

BUSINESS ADVANCED

- 2MB download and 2Mb upload SDSL connection for £160 per month.

BUSINESS ELITE

- Other speeds up to 20MB/20MB available on request.

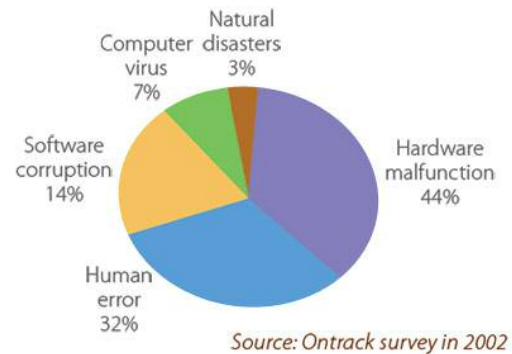

(All of our connections have a small one off setup of £250 to cover the wireless equipment and install)

iVault by Unique

Data loss can be fatal to your business.

- Do you run backups?
- Does your backup run on to more than onetape?
- Have you done a test restore lately to make sure the data is actually on the tape if you need it?
- How long would it take to locate the right tape, load the file and then restore it?
- Can you recall versions of the same file from a tape?
- Are your Notebook and Desktop PC's backed up ?
- These are just some of the questions you should ask when you look at how effective Tape Backup is.

Simple costings from £3 per Gig per month.

Using ivault and your broadband connection you can backup your data to our off-site data centre, quickly, securely and cost effectively.

Is it safe to do backup via internet?

Definitely. Your data is securely stored in a REMOTE backup server hosted by you, using military level encryption employed by most multi-national banks that require a high level of security. Encryption and decryption will only be done on client's machine with user's password, which will not be transmitted during uploading and downloading.

Which operating systems and server application platforms are supported?
